Summary

Final-year B.E. CSE (Cyber Security) student with hands-on experience in Python, C and Linux across embedded-systems, testing and automation work. Experienced in validating firmware, hardware interfaces and APIs, and in static code analysis. Looking to apply programming, software testing and documentation skills to engineering tool development and controller validation.

Work Experience

Qmax Systems India Pvt Ltd Nov 2025 – Jan 2026
Embedded Systems Security Intern *Poonamallee*

- Assessed hardware interfaces (UART/JTAG) and firmware of embedded and IoT devices used in industrial applications; analysed firmware with Ghidra to identify vulnerabilities.
- Tested device communication, APIs and endpoints using Wireshark and Burp Suite to validate behaviour and detect insecure communication.
- Contributed to embedded systems and IoT-based engineering solutions across industrial applications.

Hinduja Tech Limited May 2025 – Jun 2025
Cyber-Security Intern *Perungulathur*

- Performed static code analysis with Fortify Static Code Analyzer to uncover vulnerabilities in application code.
- Monitored and mitigated threats across cloud, application and endpoint layers; blocked DDoS attacks via Cloudflare WAF.
- Enforced data-protection policies with Forcepoint DLP and secured endpoints against active threats with SentinelOne.

Projects

EvalX – Adaptive Risk Profiling Engine for Digital Identities | *Final-Year Project* *Python, SHAP, MITRE ATT&CK*

- Built a risk-scoring engine that computes a Threat Exposure Score (TES) from OSINT-based identity correlation graphs.
- Integrated SHAP explainability so each score is interpretable, and mapped findings to the MITRE ATT&CK framework.
- Structured the system on a six-layer architecture aligned to an IEEE Access reference model.

Rennaigan – Multimodal Deepfake Forensics Platform *Python, FastAPI, PyTorch, Hugging Face, OpenCV, React/TS*

- Built the ML and backend layer of a platform analysing images, audio and video with 10+ detectors behind a FastAPI gateway, fused into a 0–100 trust score with corroboration rules against false alarms.
- Selected detectors by measured AUC on labelled test sets (AI-image 0.92–0.98, voice-clone 0.95), raising image accuracy from 57 to 96 of 120; integrated a Gemini verdict step using BM25-retrieved past cases.
- Cut an 8-minute video's analysis from 40 s to 15 s by profiling; built SHA-256 hash-chained, HMAC-signed audit logs.

CaseFlow – Investigation Intelligence Platform *Next.js, Supabase, Cytoscape.js, Vercel*

- Built a platform that resolves case data (CDRs, FIRs, financial records) into an interactive knowledge graph.
- Developed evidence-backed risk scoring, lead generation and an AI agent for natural-language case queries.

Education

Easwari Engineering College (SRM Group) 2027
B.E. Computer Science Engineering (Cyber Security) **CGPA: 8.68/10** *Ramapuram*

The Schram Academy 2023
Computer Science with Maths **XII: 80% & X: 84%** *Maduravoyal*

Skills & Certifications

- **Programming:** Python, C, JavaScript, HTML/CSS, SQL (MySQL, SQLite), MongoDB
- **Tools & Version Control:** Git, GitHub, Linux, Jupyter Notebook, VS Code, AWS
- **Testing & Analysis:** Fortify SCA (static analysis), Burp Suite (API/endpoint testing), Wireshark, Ghidra, Splunk
- **Security Platforms:** Cloudflare WAF, SentinelOne, Forcepoint DLP
- **Certifications:** Applied AI – NPTEL | Networking Basics; Switching, Routing & Wireless Essentials – Cisco | MongoDB Basics | ML, Cloud & GenAI – AWS | Generative AI & Agentic AI – EDC IIT Delhi

Leadership & Achievements

- **Leadership:** Community Service Director (Rotary DAC, 2026–27) | Chapter Lead (NexGenCyberWomen EEC) | PR Officer (CS)
- **Achievements:** 1st Place – Hackathon, Karunya Institute of Technology and Sciences | 3rd Place – Industry 4.0 Project Expo | 3× Inter-college CTF Winner
